Weapon System Support Software

School of Informatics, Computing, and Cyber Systems

Team Mentor: Italo Santos

Team: Zachary Parham, Brandon Udall, Dylan Motz, Bradley Essegian

Client: Harlan Mitchell, Laurel Enstrom: Northrop Grumman Corporation

Team Controller NORTHROP GRUMMAN

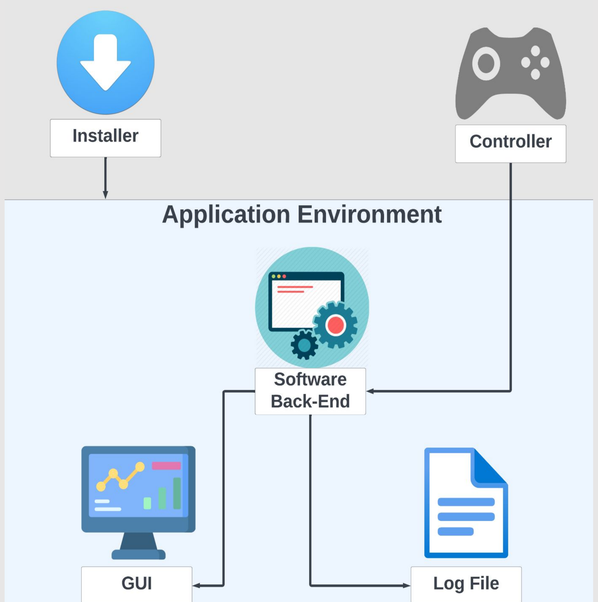
Motivation

WHO — Northrop Grumman engineers who are required to travel to diagnose their client's equipment

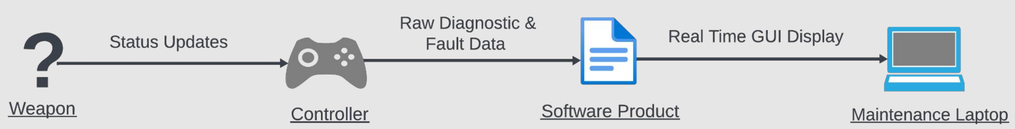
WHAT — A desktop application that will allow Northrop Grumman's client's to be able to diagnose equipment without an engineer present

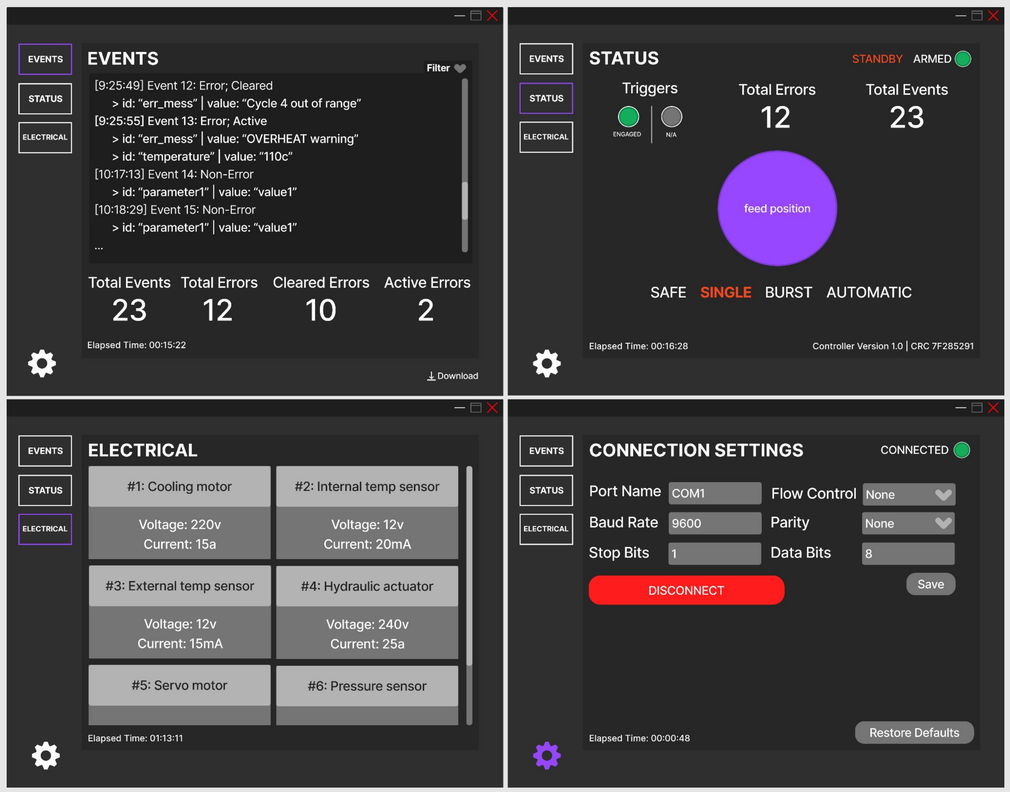
WHY — This software product will save Northrop Grumman time and money when diagnosing their client's equipment

Architecture

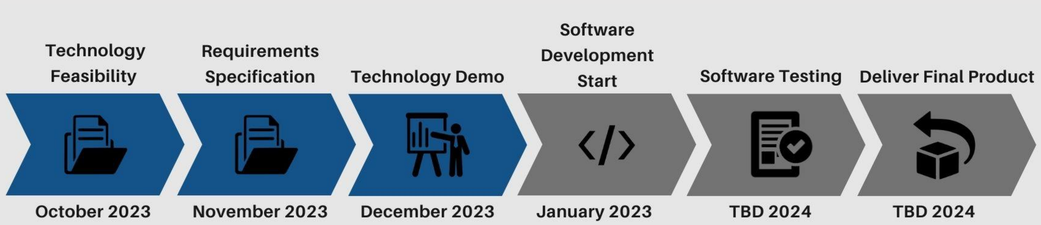


Key Features





Timeline



Inspiration

We aim to create a tool akin to an OBD2 Scanner for multi-million dollar military equipment

Technologies Planned

C++

Goals

1. Simulate weapon abstracted weapon controller data
2. Send and receive the simulated data to and from the application
3. Develop a GUI to display all faults and statuses
4. Develop an installer that allows for downloads on modern Windows operating systems
